

MANUAL FOR **MAKERACER**

MINI

SUPPORT & COMMUNITY

Thanks for downloading **Makeracer Mini**, it means a lot to our team.

We strongly advise you to join our **Discord Server**, so you can instantly submit any **questions** or **feedback**, and hang out with the of the community of Gearheads, as we call our fans.

Also, don't hesitate to **rate the model** on the platform, where you downloaded it.

JOIN DISCORD

GO BIG, GO RC!

Your Mini has a bigger brother. Do you like this project?

Check our **Expedition Prototype**,
and build a real, durable 1:16 RC car.

All parts are designed for printing on a standard FDM printer.

Each .stl file tells you right in the name which material to use. Parts are already **oriented** on the print bed for optimal printing and maximum strength. **No supports are needed.**

All components are designed to be printed with standard settings using a **0.4 mm nozzle** and a **0.2 mm layer height**.

Hint:
Try to **warm this print-in-place chassis** by moving and rotating the axles against each other. The ends of suspension have to get loose. Steer from left to right to loosen it too. Do it **gradually**, increase the strenght.

READY TO DRIVE IT?

Build the functional **RC version**.

EXPEDITION PROTOTYPE

84 / 83

What next?

Do you want the full-featured version of the MAKERACER?

Fully functional **1:16 RC** car built for real driving, not just display. **Durable** and ready for fast runs, small jumps, and everyday outdoor adventures. With **95%** of the car 3D printed.

[LEARN MORE](#)

MAKERACER

WELCOME

HERE

THE REAL POINT OF THIS PROJECT

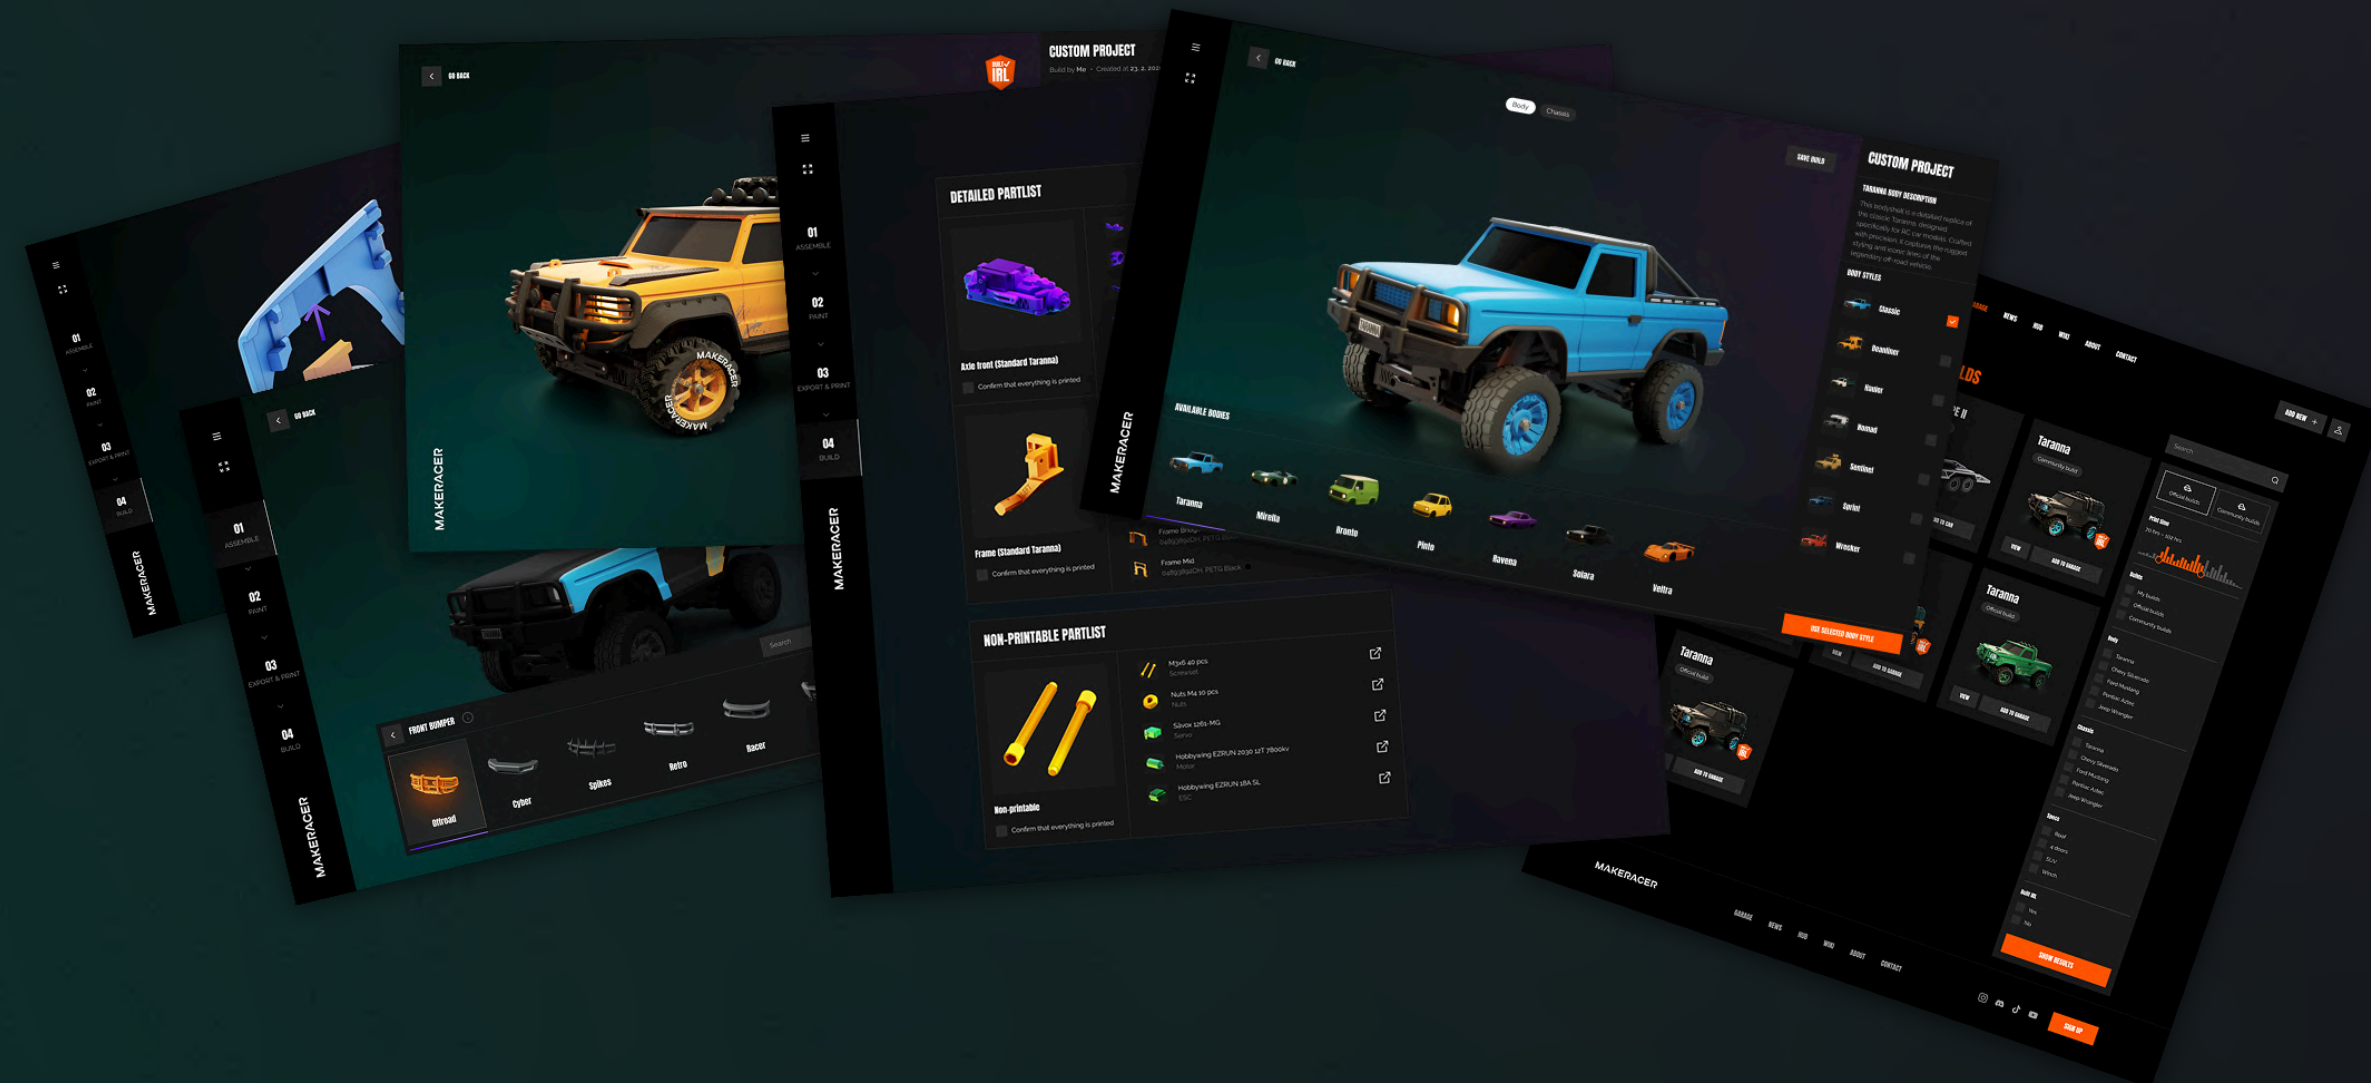

This mini model is just a simplified version of our bigger, 1:16 future modular RC car system, powered by our **Web-Based 3D Configurator**, where you'll be able to tune the car like in a video game.

This online platform, where the community will create cars from pre-tested modular parts, share them, remix them, and upgrade them with a constantly growing library of compatible parts, is **our main product**.

The app is currently in development, and until it's ready, we'll provide early releases for the community on platforms like **Gumroad** and **Printables**.

Want to see how it will work?

TAKE THE TOUR

MAKERACER

GET THE BIG RC'S MANUAL FOR FREE!

By downloading this car, you've supported a much larger mission: building the first-ever **Web-Based Configurator** where you can modify your 3D-printable car to your liking.

Thanks for that.

If you want to know more about our progress, join my honest weekly newsletter, **Makeracer Brief**. It's quite essential, I share most of the big updates there with the core fan club. So if you enjoy this miniature, you'll enjoy these funny development stories too!

And now the best thing, you get the **Expedition Prototype manual** for free in return!

JOIN & GET MANUAL

FREE!

THANKS AGAIN!

JOIN DISCORD

Are you stuck?

Reach out to our team on our
Discord channel!

To close this manual, let's sum up the key points:

- If you get stuck, join our **Discord Server**, describe your issue clearly, and tag one of the team members.
- Most importantly, have fun. If you're stressed or frustrated at any step, rant about it on Discord, or leave it for a while and come back with a clear head.

Good luck!
Matěj (CEO) & the team

MAKERACER
